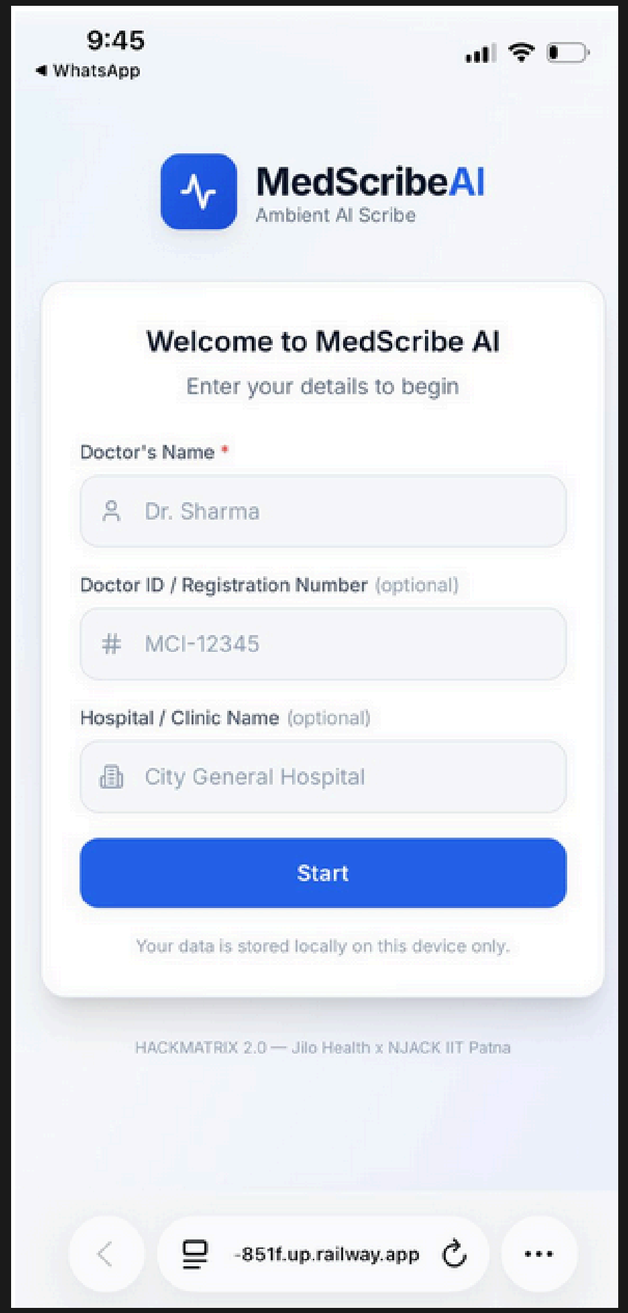
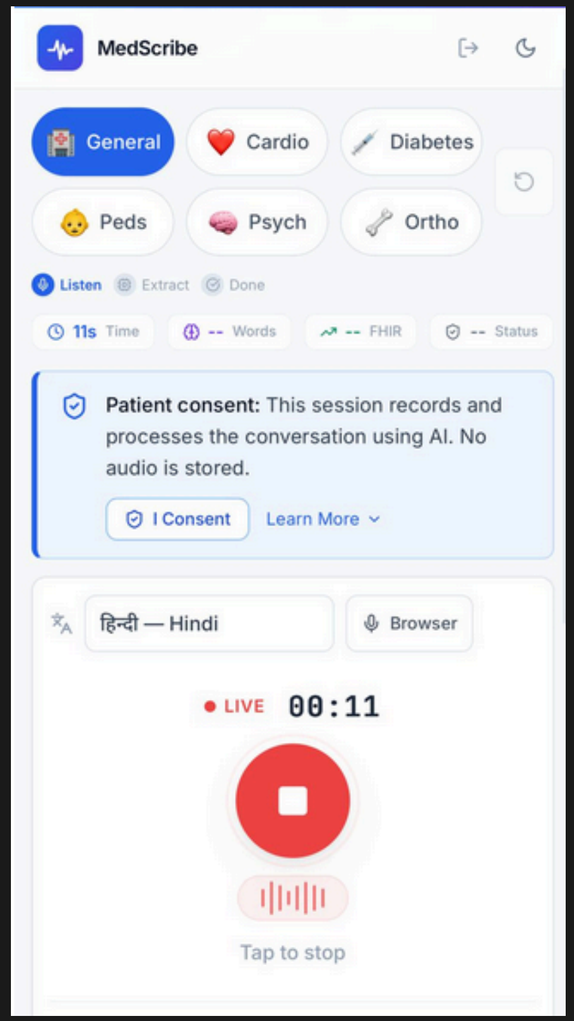
The Documentation Dilemma

Indian doctors are **losing valuable time** due to excessive documentation requirements. On average, they spend over 2 hours each day on paperwork instead of focusing on patient care. This inefficiency highlights the urgent need for innovative solutions in healthcare documentation.



Our Innovative Solution



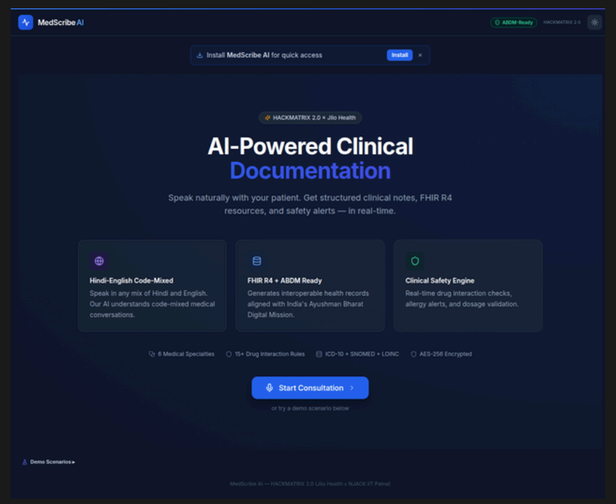
Record

Seamlessly capture patient interactions and convert them into structured data for better clinical documentation.

Protect

Ensure patient data security with advanced encryption methods, maintaining compliance with industry standards and regulations.

Mobile First Features



Installable

MedScribe AI can be easily installed on any phone without needing an app store.

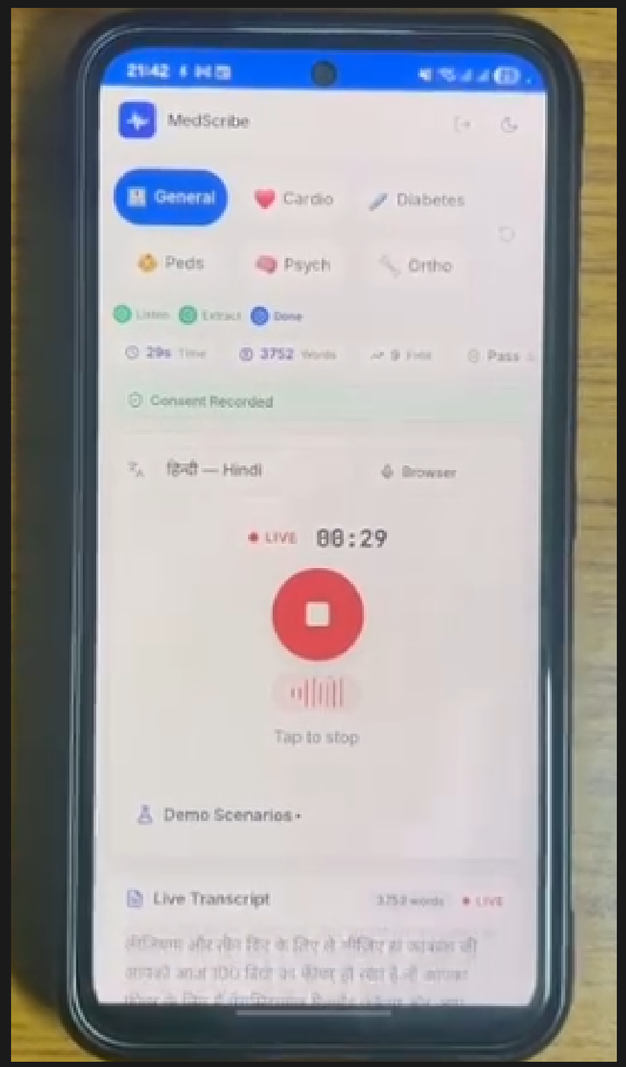
Accessibility

The platform supports multiple languages, ensuring accessibility for diverse users across India.

Dark Mode

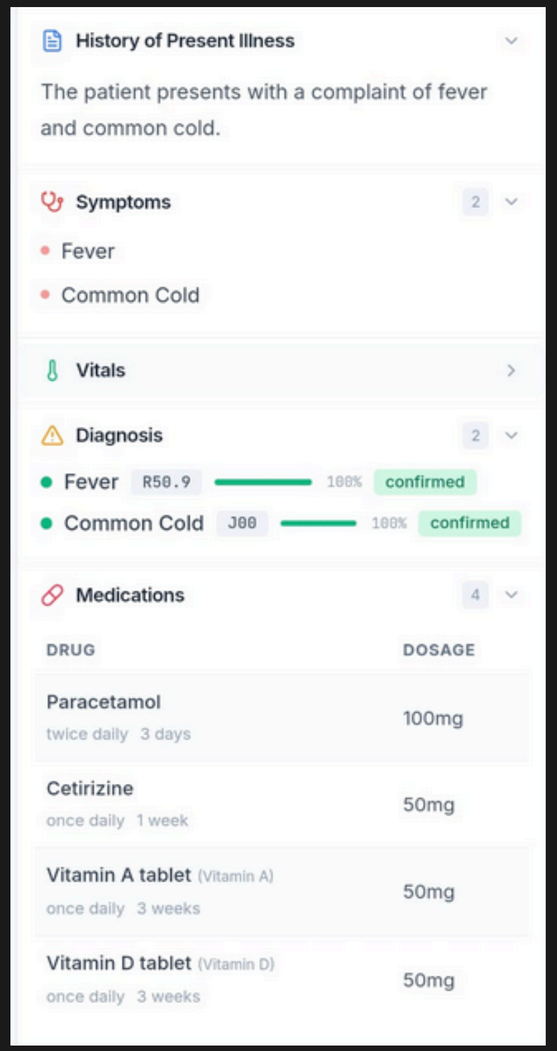
A dark mode feature enhances usability in low-light environments, providing a comfortable user experience.

Hindi-English Code Mixing



MedScribe AI effectively integrates **Hindi-English code mixing**, allowing seamless communication in medical settings. By mapping common Hindi terms to their English equivalents, the platform enhances usability for healthcare professionals, ensuring clarity and precision in patient documentation across 10 Indian languages.

AI Extracted Clinical Note



Diagnosis

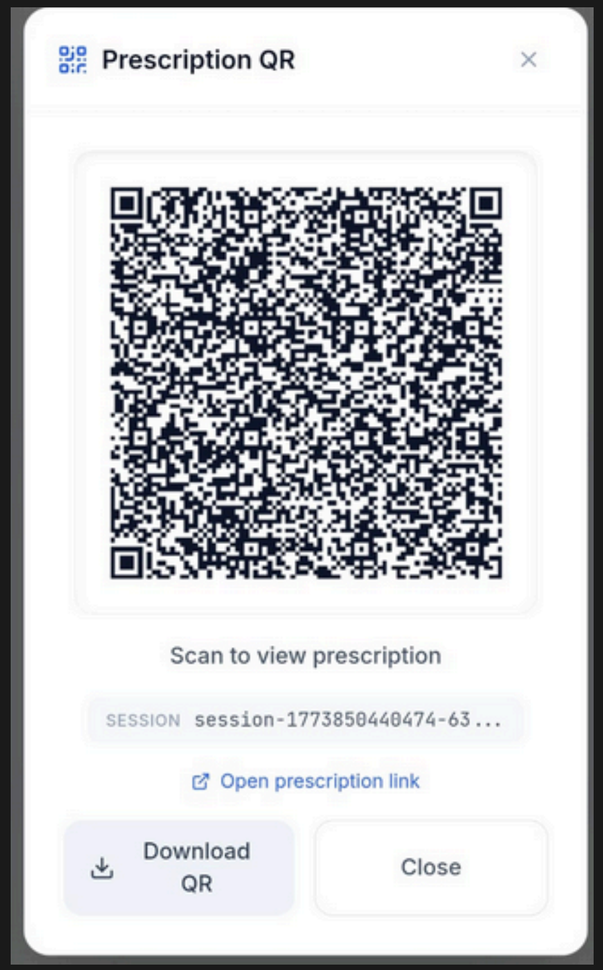
Extracts diagnosis using ICD 10 codes, streamlining documentation and improving accuracy for healthcare providers.

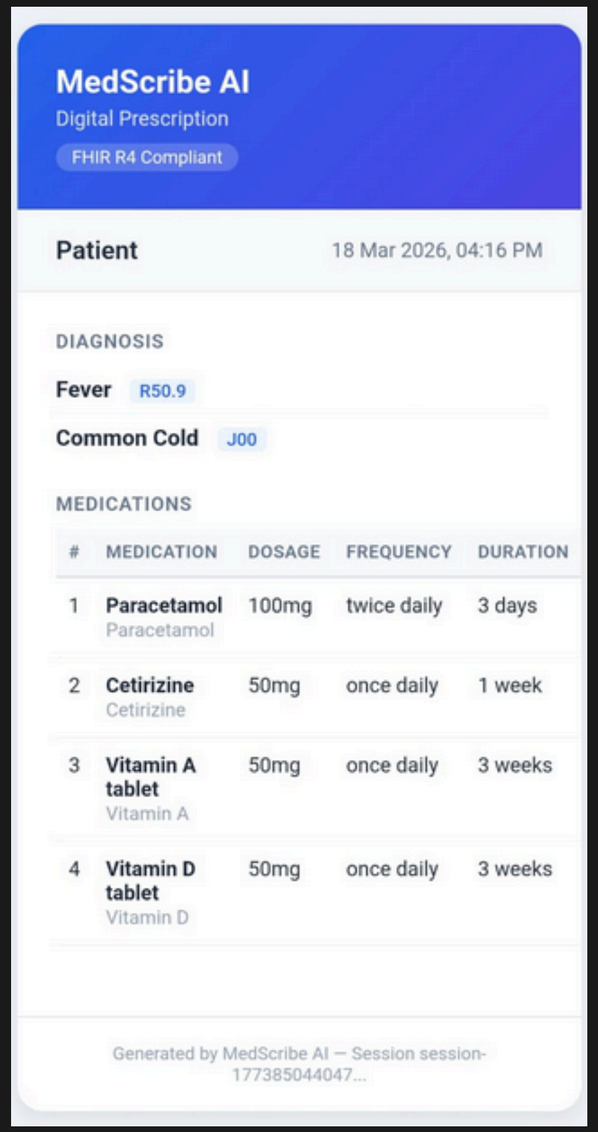
Medications

Captures prescribed medications from speech, enhancing prescription accuracy and ensuring patient safety during consultations.

Digital Prescription

The **Digital Prescription** feature allows for easy access to patient prescriptions through a scannable QR code. This innovation ensures **quick retrieval** of medication information, enhancing efficiency and accuracy in healthcare delivery while maintaining FHIR R4 compliance for data integrity.





Clinical Decision Support

Drug Interactions

Our system checks **15 critical drug interaction rules** to enhance patient safety and treatment efficacy.

Allergy Checks

Automated checks for patient allergies ensure safe medication prescriptions and prevent adverse reactions.

Dosage Validation

The application validates dosages according to guidelines, minimizing the risk of medication errors.
